

Increase Cost Efficiency and Security with a Managed Private Cloud Powered by Intel

Companies moving workloads to the cloud want to be confident that critical business applications are operational around the clock. In addition, they seek cost efficiency and security. Wortmann AG and Intel worked together to design a Managed Infrastructure as a Service (IaaS) offering, called Managed IaaS. All Managed IaaS servers feature the latest innovations from Intel, including 2nd Gen Intel® Xeon® Scalable processors, Intel® 3D NAND and Intel® Optane™ SSDs, with high security standards and a multitude of automated processes and excellent scalability to help customers grow their businesses. The Managed IaaS solution is used for a wide variety of workloads, including databases, terminal servers, enterprise resource planning (ERP) and document management systems (DMS).

“Wortmann AG and Intel have enjoyed a close relationship. When working in the data center, we pool our joint expertise and validate the technology and architecture together.”

Soner Selvi, Cloud Sales Consultant, Wortmann AG
